

LIGHTHOUSE

LightHouse the special light pole!

This light pole can be used for various purposes. Due to its elegant shape and user-friendliness, this light pole can easily be installed by 1 person. If the user wishes to use the LightHouse as emergency lighting or emission-free lighting mast, this is the most suitable of its kind. The battery unit is equipped as standard with a switch to turn the lights on or off by failure or evacuation. If only the battery is used, the light pole can function autonomously between 13 and 50 hours. This depends on the capacity and the consumption of the LED lamps. The LightHouse is completely closed, which means that the winch and the electronic part are protected against unauthorized persons. 22 pieces can be transported per trailer.

sale only for larger quantities
