

MOBILE GROUND SOLAR

Stackable, mobile powerful solar panels

These solid frames have been specifically developed to be placed on the ground in combination with our Battery pack or the internal battery pack that is present in the STALICO camera mast. The MOBILE GROUND SOLAR has 4 solar panels of 415WP per panel and are linked to a VICTRON solar charger. With a 5m charging cable with SB120 24V plug, these are connected to the external battery pack or the internal battery in the camera mast.

These solar panels can be connected individually with the battery pack and can be combined with the STALICO Compact Hybrid. Can be linked in pairs to our new STALICO OFFGRID XXL system.

Specifications

- Steel frame 4m x 2m x 0.75m
- 4 x SUNPOWER panel 415WP
- 4980WP to be placed in stages
- VICTRON solar charger 12/24 / 48V
- Stackable per 5 pieces
