

OFFGRID HYBRID SYSTEM

NEW!!!!

The OFFGRID HYBRID SYSTEM is a completely independent intelligent energy system.

This system saves up to 80%CO². No more power loss by only supplying the power demand from a large lithium battery pack. By bringing together a diesel generator, mobile solar panels and battery storage, this OFFGRID HYBRID SYSTEM becomes the most sustainable energy solution for temporary use.

Specifications at 8000W 24/7

kVA Hybrid : 24 kVA

kVA Generator : 44 kVA

In combination with our Ground Solar : +/- 2400Wp

Maximum connected power 20KW

Tank capacity : 695l

Diesel consumption l/h : 7.5l/h

Consumption hours/week for average 8000W 24/7 : 55h/w

Diesel consumption/week : 412,5l

80% CO less than normal generator
